

## Computational Sciences / Campus Planning

Bard College plans to enhance the facilities and scope of its Computational Sciences Department. AAP assisted in the planning process through consideration of several central campus sites, including the scheme depicted here. The demolition of the Old Gym opened up exciting new opportunities to create landscaped outdoor

spaces, and a compelling atrium between old and new architecture. The glass connection would be a place for gathering and exchanging ideas, and relaxing between classes. It would serve as a literal link between the digital world and the historic academic realm.

The project is currently under the direction of architect Rafael Vinoly's office.
