

Oakwood Friends School: Math & Science Building

Site

The new Math and Science Building joins with the existing library and three existing classroom buildings to give form and definition to the Academic Quad. The building features an octagonal meeting room, which provides a centralized focus for the quad and adds a classical expression to the building form.

Building

All new classroom and laboratory functions are organized around a wide, skylit circulation hall. Every room receives natural light from at least two sides as well as from above.

Materials

Standard light gauge steel construction with 4" CMU veneer and exterior stucco finish, aluminum clad windows, stucco, oak cabinetry and trim.
